

PRODUCT DESIGN

Designing Meta for Blood Donation

How would you design META for blood donation ?

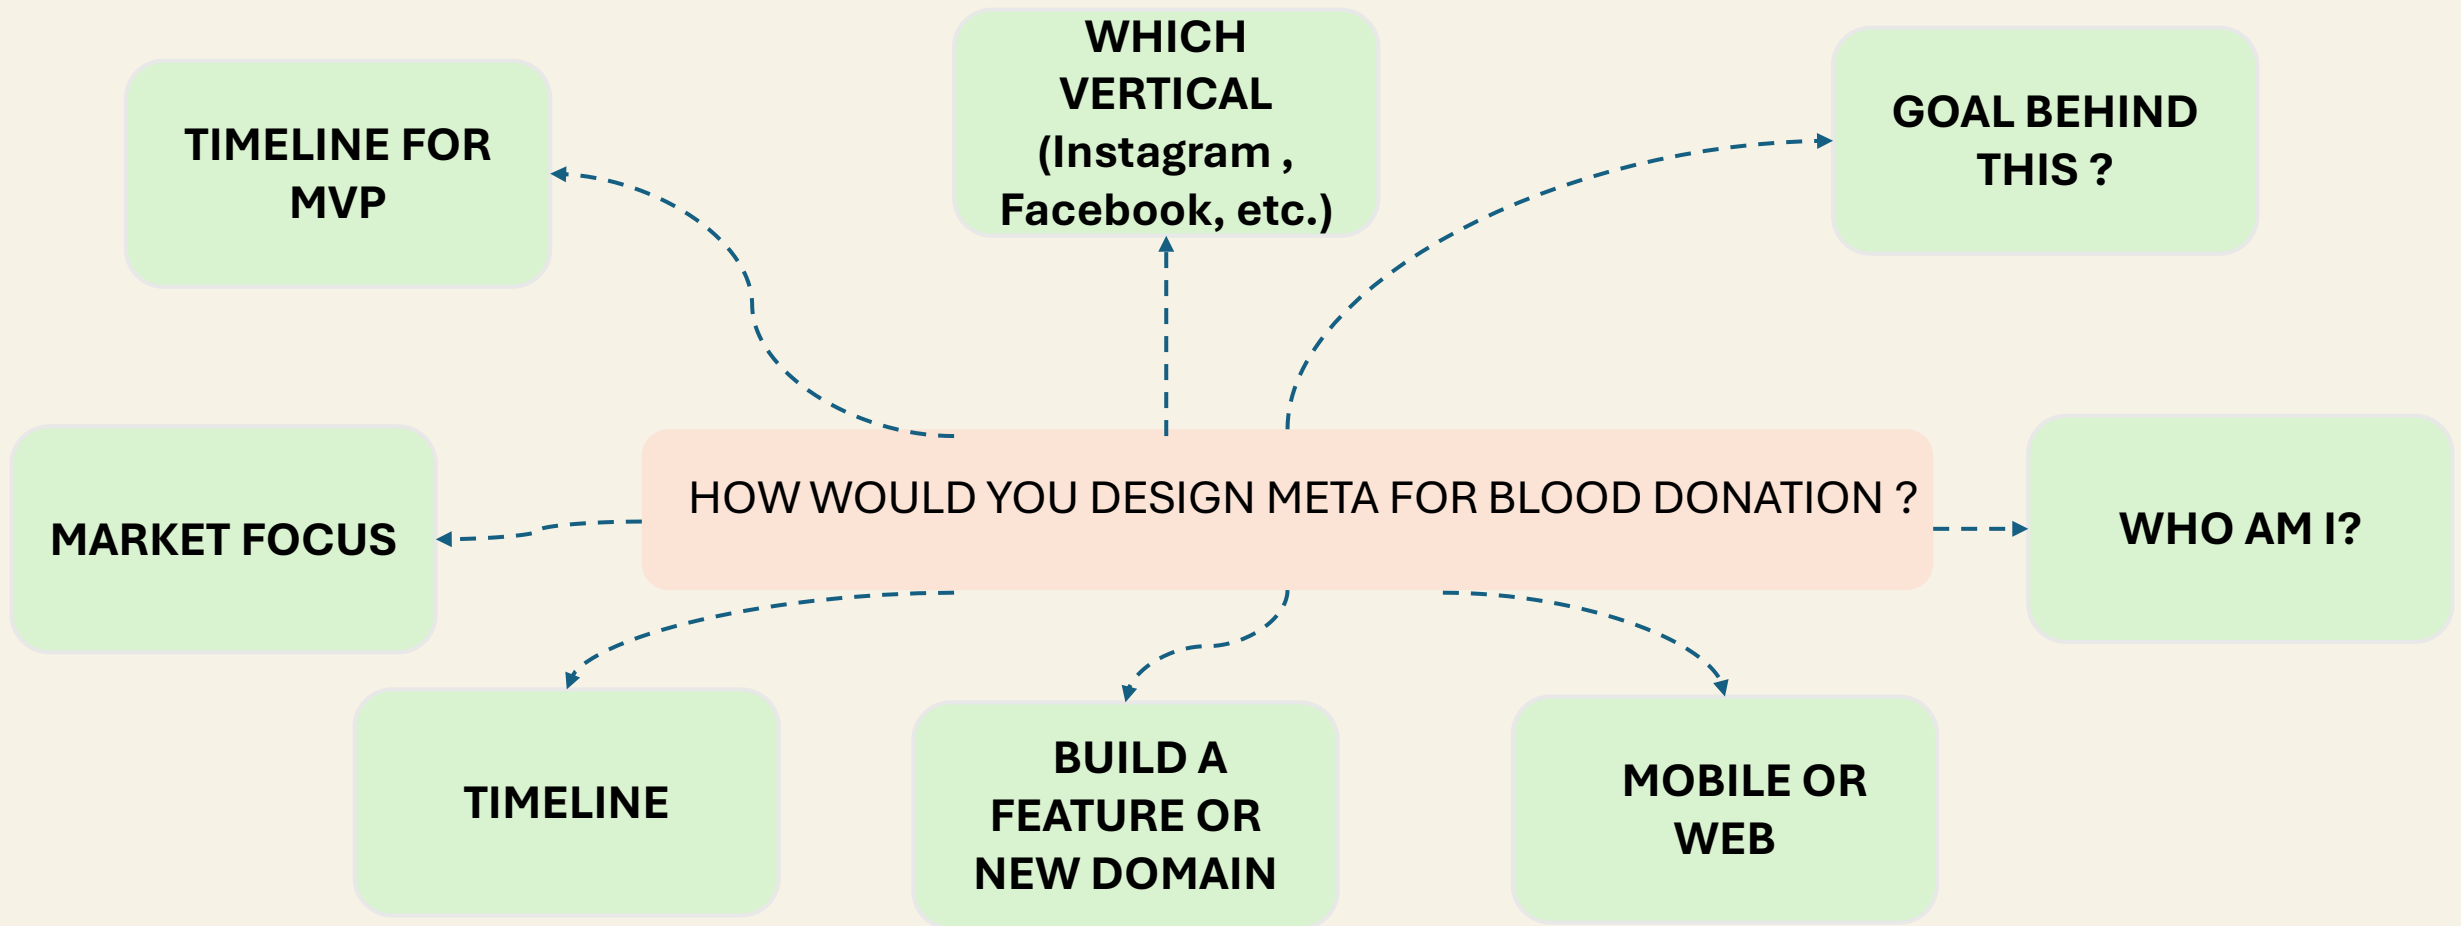

Meta PM Interview

Meta

Connect intent, location, and trusted community nudges to increase completed donations.

CLARIFYING QUESTION

Assumption : You are product manager , Facebook core mission is to connect people and from the post we have analyzed there seems to be match the donor with those with an immediate need . We need mobile app first and the timeline is 3 months for MVP.

ECOSYSTEM AND USER SEGMENTATION

ECOSYSTEM

1. HOSPITALS
2. PATIENTS
3. BLOOD DONORS
4. DOCTORS

USER MOTIVATION SEGMENTATION

- 1. Emergency Seekers**
Need: Immediate blood
Pain: No real-time data
- 2. Hospitals / Blood Banks**
Need: Manage inventory
Pain: Manual, outdated updates
- 3. Active Donors**
Need: Trusted centers
Pain: Low awareness
- 4. Passive Donors**
Need: Urgent alerts
Pain: No targeted notifications

PAINPOINT

Dr. SHEELA (32F)– Surgeon at AIIMS

“Sometimes we urgently need rare blood groups like AB-negative. We have donor lists, but reaching them quickly is difficult and many numbers are outdated.”

ARUN (22M) – College student

“I donated blood once during a college drive, but after that I never received any updates. I would donate again if I was reminded or invited.”

RAMESH(34M)— Auto Driver, Bengaluru

“When my wife needed O-negative blood urgently, I had no idea where to find a donor. I kept calling friends and posting in WhatsApp groups, Facebook but every minute felt critical.”

SUMMARY :

1. Emergency donor search is slow.
2. Hospitals struggle to reach verified donors quickly.
3. Low repeat donation due to poor donor engagement.
4. NGOs lack targeted tools to mobilize donors.

SOLUTION

Phase 1 — Blood Donation Discovery Tab

Add a “Blood Donation” tab in Facebook that shows area-wise trusted blood banks and donation centers, along with real-time blood availability.

Phase 2 — Donor Registration Network

Introduce a voluntary donor sign-up form where users can register their blood group, location, and availability, enabling hospitals to contact eligible donors during shortages.

Phase 3 — Smart Matching & Emergency Alerts

Use Meta’s social graph to match urgent blood requests with nearby registered donors and send instant alerts/notifications to those with the required blood group.

Phase 4 — Engagement & Retention

Encourage repeat donations through eligibility reminders, badges, and community recognition within Facebook groups and profiles.

METRIC

Top of Funnel (Acquisition & Interest)

-  **CTR:** Click-through rate measuring initial feature adoption.
-  **Supply Growth:** Rate of new provider onboarding.

Mid Funnel (Activation)

-  **Booking Conversion Rate:** The percentage of users who discover a service and successfully complete a secure payment.

Bottom of Funnel (Retention & Value)

-  **Repeat Bookings:** Measuring long-term retention and trust.
-  **DAU / MAU:** Daily and Monthly Active Users engaging specifically with the Services tab.

RISK

Risk Diagnostic		
Risk Category	Specific Threat	Systemic Mitigation
Trust	Safety & trust issues between strangers.	Mandatory KYC,  verified certification badges, and  secure in-app tracking.
Market Dynamics	Supply-demand imbalance.	Phased metro rollout and targeted local partnerships to artificially boost initial supply.
Operational	Pricing disputes & quality inconsistency.	Strictly enforced standardized pricing models paired with a transparent ratings  system.
